

THE AIR POWERED **JETYD** BOLTING MACHINES

Revolutionize
the Industrial Bolting Operations
by Torque and by Tension

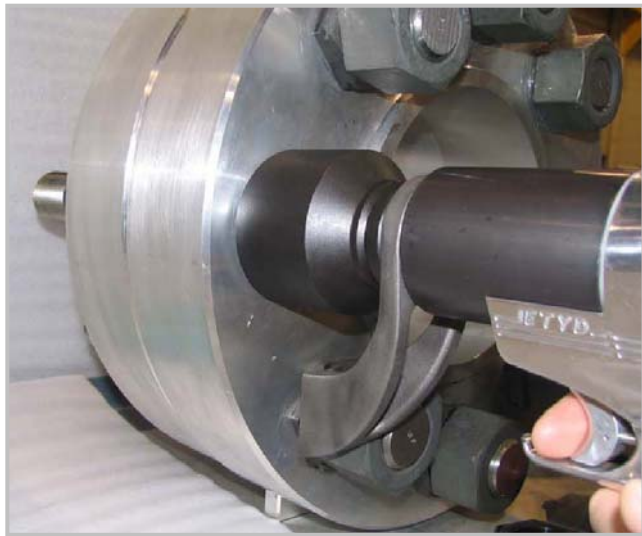

The **JETYD GUN** provides
SPEED and **SIMPLICITY**

Without the vibrations, the inaccuracy
and the heavy weight of impact wrenches

BOLTING by TORQUE

with Reaction Arm 360° around the Nut
and with Standard Sockets

Continuous Rotation and
Constant Power for Tightening
with Accurate Final Torque

Directive 2002/44/EC: Taking account of technical progress ... the risks arising from exposure to mechanical vibrations shall be eliminated at their source or reduced to a minimum.

Safe Loosening

Without impacts on Nuts-Bolts
Without Hand transmitted Vibrations

Through the Continuous Rotation and Constant Power, the JETYD GUN eliminates the risks of Hand-Arm Vibration Syndrome (HAVS) and the Noise caused by work with usual pneumatic impact tools.

BOLTING by TENSION

Without Reaction Arm

- No Bolt Side Load
- No Need of Backup Wrench

Tension Accessory:

The **HYTORC® LoadDISC®**

Washer:

- to avoid Surface Galling and to Control the Friction of Nuts
- to eliminate the Reaction Arm and the Bolt Side Load
- to allow for a Straight Axial Bolt Elongation directly to the Accurate Final Load

OPTIMIZATION of BOLTING OPERATIONS for:

- HIGH Bolt Load ACCURACY
- SAFE Bolted Connections
 - LEAK-FREE Flanges
